Green Plan - Powder Coating Plant

The plant was opened in spring 2020 in Ózd – Industrial Park.
We built our plant with two objectives:

to sinter our own products (inverter holders, candelabra, and other metal structures that we are manufacturing) at the highest possible standards,

and to offer our current and future partners the best value for money and quality service on the market.

Excellent Quality

State-of-the-art technology of the 21st century ensures excellent quality for us and our partners. Durable coating and impeccable quality provided by our nozzle preparation cabins are essential for corrosion protection processes.

- iron-phosphate degreaser
- salt-free, RO (dionic) rinse
- passivation booth
- drying chamber

We use GEMA powder spray gun in our powder coater chamber. Painting is completed by a burn-in process setting the appropriate technological time according to the properties of the material.

Sintereble materials

Steel

Galvanized steel

Aluminium

High technology and quality

Iron-phosphate degreaser

Maximum dimensions of the painted items

Length: 6500 mm

Height: 2000 mm

Width: 1400 mm

Weight: 500 kg

RO (dionic) rinse and passivation booth

All three preparation cabins are equipped with a nozzle flush system

Drying chamber

Powder coater chamber

GEMA powder spray gun

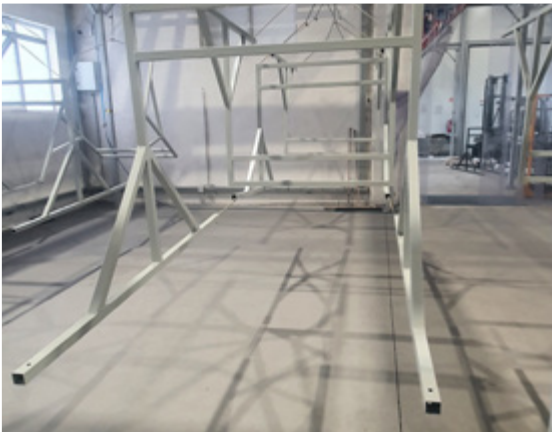

Burn-in furnace

Finished products

Metal garden furniture

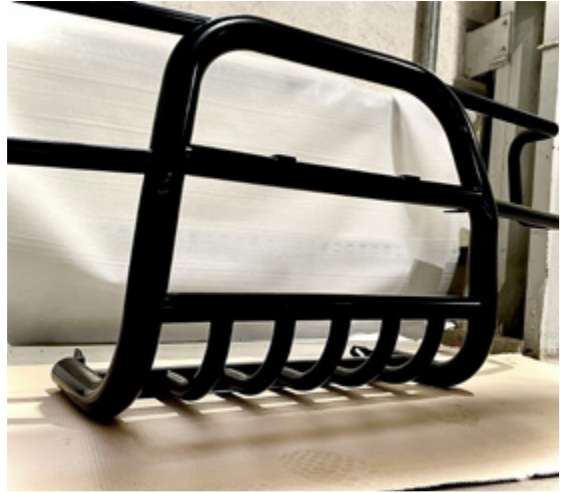

Candelabra, inverter holders and other metal structures

Metal fence

Car rims

Car parts

Agricultural machinery parts

Industrial steel stairs

Laser cut steel sheets
